

CLAIMS

5 I CLAIM:

Sub 17 1. In a telecommunications system functionally interconnecting a service switching point, a service control point, and an intelligent network element, and the telecommunications system including a billing system functionally connected at least 10 to the service control point, the billing system including telecommunications accounts for charging fees to subscribers with respect to telecommunications services provided to the subscribers, a method for using a communication to conduct a transaction with respect to a telecommunications account, comprising:

- A. receiving the communication at the service switching point, the 15 communication being associated with a calling line number;
- B. causing the service switching point to route the communication to the intelligent network element;
- C. causing the intelligent network element to obtain a telecommunications account number and a transaction amount from the communication, 20 the telecommunications account number corresponding to the telecommunications account with respect to which the transaction is to be conducted in the billing system;
- D. in response to obtaining the telecommunications account number and the transaction amount, causing the intelligent network element to provide the 25 telecommunications account number, the transaction amount, and the calling line number associated with the communication to the service control point;
- E. in response to receipt of the telecommunications account number, the transaction amount, and the calling line number, causing the service control point to

make the telecommunications account number, the transaction amount, and the calling line number available to the billing system; and

F. causing the billing system

5 i. to obtain the telecommunications account number, the transaction amount, and the calling line number, and

ii. to conduct the transaction in the billing system with respect to the telecommunications account associated with the telecommunications account number by crediting the telecommunications account by at least the transaction amount,

10 whereby the transaction is conducted by the billing system by using the telecommunications account number and the transaction amount provided by the communication and made available to the billing system by the intelligent network element and the service control point in order to credit the telecommunications account corresponding to the telecommunications account number in the billing system by at least the transaction amount.

15 2. The method of Claim 1, wherein the transaction amount comprises a number of units or a dollar amount; and

20 wherein action F comprises causing the billing system to conduct the transaction by crediting the telecommunications account by at least the number of units or by at least the dollar amount.

25 3. The method of Claim 1, wherein the telecommunications account number comprises a different account number from a calling line number account corresponding to the calling line number associated with the communication is received at the service switching point; and

wherein action F further comprises causing the billing system to conduct the transaction in the billing system by debiting the calling line number account by at least the transaction amount.

5 4. The method of Claim 1, wherein prior to causing the service control point to make the telecommunications account number, the transaction amount, and the calling line number available to the billing system, the method further comprises causing the service control point to carry out a validation whose result comprises a determination that the calling line number is authorized with respect to conduct of the
10 transaction.

10 5. The method of Claim 4, wherein action C comprises causing the intelligent network element to obtain a personal identification number (PIN) from the communication, and wherein the validation comprises comparing the PIN for correspondence to a stored PIN associated with the calling line number.

15 6. The method of Claim 4, wherein the validation comprises comparing the telecommunications account number for correspondence to a stored telecommunications account number associated with the calling line number.

20 7. The method of Claim 1, further comprising:
25 G. causing the service control point to provide a confirmation regarding the conduct of the transaction to the intelligent network element; and
 H. in response to receipt of the confirmation, causing the intelligent network element to provide an announcement to the communication.

8. The method of Claim 1, wherein action E comprises causing the service control point to make the telecommunications account number, the transaction

amount, and the calling line number available to the billing system by including the telecommunications account number, the transaction amount, and the calling line number in a billing message and by posting the billing message for obtaining by the billing system.

5

9. The method of Claim 8, wherein action F comprises causing the billing system to obtain the telecommunications account number, the transaction amount, and the calling line number by obtaining the billing message posted by the service control point.

卷之三

Sub a37

10. A method for using a communication in a telecommunications network to execute a transaction with respect to an account, comprising:

5 A. receiving a communication on a calling line associated with a calling line number;

10 B. obtaining an account number and a transaction amount from the communication, the account number corresponding to an account with respect to which a transaction is to be conducted, the account differing from a calling line number account associated with the calling line number;

15 C. creating a billing message with respect to the calling line number, the billing message including the account number, the transaction amount, and the calling line number; and

20 D. using the account number and the transaction amount from the billing message to execute the transaction with respect to the account corresponding to the account number.

11. The method of Claim 10, wherein the communication is directed to a special access code; and

20 wherein actions B - D are responsive to the communication being directed to the special access code.

12. The method of Claim 10, wherein the transaction amount comprises a number of units or a dollar amount; and

25 wherein action D comprises using the account number, and the number of units or the dollar amount, to execute the transaction by crediting the account by at least the number of units or by at least the dollar amount and by debiting the calling line number account by at least the number of units or by at least the dollar amount.

13. The method of Claim 10, further comprising:
E. charging the calling number line account associated with the calling line number a fee for the transaction.

5 14. The method of Claim 10, further comprising:
E. providing the communication with an announcement regarding the transaction.

Sub a 15 15. The method of Claim 10, wherein prior to obtaining the account number and the transaction amount from the communication, the method further comprises making a validation whose result comprises a determination that the calling line number is authorized with respect to conduct of the transaction.

Sub a 16 16. The method of Claim 15, wherein the validation comprises:
i. obtaining a personal identification number (PIN) from the communication, and
ii. checking that the PIN corresponds to a stored PIN associated with the calling line number.

Sub a 17 17. The method of Claim 15, wherein the validation comprises comparing the account number for correspondence to a stored account number associated with the calling line number.

Subs 18. In a system for billing fees to subscribers for provision of telecommunications services, each subscriber having a telecommunications account in the system, the telecommunications account being associated with at least one calling line number, a method to conduct a transaction with respect to a telecommunications account in the system, comprising:

- 5 A. obtaining a billing message generated as a result of a telecommunications service performed with respect to a calling line number;
- 10 B. in response to obtaining of the billing message, making a determination that the billing message includes an indication that a transaction is to be conducted with respect to a telecommunications account in the system; and
- 15 C. in response to the determination, conducting the transaction with respect to the telecommunications account.

15 19. The method of Claim 18, wherein action C comprises conducting the transaction with respect to the telecommunications account by crediting the telecommunications account by at least a number of units or a dollar amount, and/or debiting a different telecommunications account by at least the number of units and/or by at least the dollar amount, the different telecommunications account being 20 associated with the calling line number receiving the telecommunications service that generated the billing message.

20. The method of Claim 18, wherein the indication comprises transaction information; and

25 wherein action C comprises conducting the transaction using the transaction information with respect to the telecommunications account.

21. The method of Claim 20, wherein the transaction information comprises a number of units and/or a dollar amount; and

wherein action C comprises conducting the transaction using the number of units and/or the dollar amount with respect to the telecommunications account.

5

22. The method of Claim 18, further comprising:

D. generating an invoice for the telecommunications account, the invoice indicating conduct of the transaction with respect to the telecommunications account.

10

23. The method of Claim 22, wherein the invoice further indicates a message with respect to the transaction conducted with respect to the telecommunications account.

15

24. The method of Claim 22, further comprising:

E. generating a different invoice for the different telecommunications account, the different invoice indicating the conduct of the transaction with respect to the telecommunications account.

20

25. The method of Claim 24, wherein the different invoice further indicates

a different message with respect to the transaction conducted with respect to the telecommunications account.

26. In a telecommunications system wherein a billing message is created with respect to a communication, wherein the billing message is further created with respect to a calling line number account corresponding to a calling line number associated with the communication, and wherein the billing message is obtained by a billing system having access to the calling line number account and to other accounts, a method for execution of a transaction in the billing system between the calling line number account and one of the other accounts to which the billing system has access, comprising:

10 A. providing that the billing message includes an indication for the execution of the transaction.

B. causing the billing system to make a recognition of the indication in the billing message; and

C. in response to the indication in the billing message, causing the billing system to execute the transaction between the calling line number account and the one of the other accounts.

15 27. The method of Claim 26, wherein action C comprises causing the billing system to execute the transaction by crediting the one of the other accounts by at least a number of units or a dollar amount, and/or debiting the calling line number account by at least the number of units and/or by at least the dollar amount.

20 28. The method of Claim 27, wherein action C comprises causing the billing system to execute the transaction by debiting the calling line number account by a service fee for the transaction.

25 29. The method of Claim 26, wherein the indication comprises transaction information; and

wherein action C comprises causing the billing system to execute the transaction between the calling line number account and the one of the other accounts by using the transaction information.

5 30. The method of Claim 26, further comprising:

D. causing the billing system to generate an invoice for the one of the other accounts, the invoice indicating execution of the transaction with respect to the one of the other accounts.

10 31. The method of Claim 30, wherein the invoice further indicates a message with respect to the transaction conducted with respect to the one of the other accounts.

32. The method of Claim 30, further comprising:

15 E. generating a different invoice for the calling line number account, the different invoice indicating the execution of the transaction with respect to the one of the other accounts.

20 33. The method of Claim 32, wherein the different invoice further indicates a different message with respect to the transaction conducted with respect to the one of the other accounts.

34. In a telecommunications system functionally interconnecting a service switching point, a service control point, and an intelligent network element, and the telecommunications system including a billing system functionally connected at least to the service control point, the billing system including accounts for conducting transactions, a method for using a communication to conduct a transaction with respect to an account, comprising:

- A. receiving the communication at the service switching point, the communication being associated with a calling line number;
- B. causing the service switching point to route the communication to the intelligent network element;
- C. causing the intelligent network element to obtain an account number and a transaction amount from the communication, the account number corresponding to the account with respect to which the transaction is to be conducted in the billing system;
- D. in response to obtaining the account number and the transaction amount, causing the intelligent network element to provide the account number, the transaction amount, and the calling line number associated with the communication to the service control point;
- E. in response to receipt of the account number, the transaction amount, and the calling line number, causing the service control point to make the account number, the transaction amount, and the calling line number available to the billing system by including the account number, the transaction amount, and the calling line number in a billing message and by posting the billing message for obtaining by the billing system; and
- F. causing the billing system

i. to obtain the account number, the transaction amount, and the calling line number by obtaining the billing message posted by the service control point, and

5 ii. to conduct the transaction in the billing system with respect to the account associated with the account number by crediting the account by at least the transaction amount,

10 whereby the transaction is conducted by the billing system by using the account number and the transaction amount provided by the communication and made available to the billing system by the intelligent network element and the service control point in order to credit the account corresponding to the account number in the billing system by at least the transaction amount.
